whether the topic of discussion is your editor or someone else's vi has been the standard editor for close to 30 years popular on unix and linux it has a growing following on windows systems too most experienced system administrators cite vi as their tool of choice and since 1986 this book has been the guide for vi however unix systems are not what they were 30 years ago and neither is this book while retaining all the valuable features of previous editions the 7th edition of learning the vi and vim editors has been expanded to include detailed information on vim the leading vi clone vim is of windows vista several recent papers underline methodological points that limit the validity of published results in imaging studies in the life sciences and especially the neurosciences carp 2012 ingre 2012 button et al 2013 ioannidis 2014 at least three main points are identified that lead to biased conclusions in research findings endemic low statistical power and selective outcome and selective analysis reporting because of this and in view of the lack of replication studies false discoveries or solutions persist to overcome the poor reliability of research findings several actions should be promoted including conducting large cohort studies data sharing and data reanalysis the construction of large scale online databases should be facilitated as they may contribute to the definition of a collective mind fox et al 2014 facilitating open collaborative work or crowd science franzoni and sauermann 2014 although technology alone cannot change scientists practices wicherts et al 2011 wallis et al 2013 poldrack and gorgolewski 2014 roche et al 2014 technical solutions should be identified which support a more open science approach also the analysis of the data plays an important role for the analysis of large datasets image processing pipelines should be constructed based on the best algorithms available and their performance should be objectively compared to diffuse the more relevant solutions also provenance of processed data should be ensured mackenzie graham et al 2008 in population imaging this would mean providing effective tools for data sharing and analysis without increasing the burden on researchers this subject is the main objective of this research topic it cross listed between the specialty section computer image analysis of frontiers in ict and frontiers in neuroinformatics firstly it gathers works on innovative solutions for the management of large imaging datasets possibly distributed in various centers the paper of danso et al describes their experience with the integration of neuroimaging data coming from several stroke imaging research projects they detail how the initial neurogrid core metadata schema was gradually extended for capturing all information required for future metaanalysis while ensuring semantic interoperability for future integration with other biomedical ontologies with a similar preoccupation of interoperability shanoir relies on the ontoneurolog ontology temal et al 2008 gibaud et al 2011 batrancourt et al 2015 a semantic model that formally described entities and relations in medical imaging neuropsychological and behavioral assessment domains the mechanism of study card allows to seamlessly populate metadata aligned with the ontology avoiding fastidious manual entrance and the automatic control of the conformity of imported data with a predefined study protocol the ambitious objective with the biomist platform is to provide an environment managing the entire cycle of neuroimaging data from acquisition to analysis ensuring full provenance information of any derived data interestingly it is conceived based on the product lifecycle management approach used in industry for managing products here neuroimaging data from inception to manufacturing shanoir and biomist share in part the same ontoneurolog ontology facilitating their interoperability archimed is a data management system locally integrated for 5 years in a clinical environment not restricted to neuroimaging archimed deals with multi modal and multi organs imaging data with specific considerations for data long term conservation and confidentiality in accordance with the french legislation shanoir and archimed are integrated into fli iam1 the national french it infrastructure for in vivo imaging in an ideal world an operating system would do its work in the background while you did your work in the foreground in our world however operating systems constantly get in the way and

of windows xp this open access book summarizes knowledge about several file systems and file formats commonly used in mobile devices in addition to the fundamental description of the formats there are hints about the forensic value of possible artefacts along with an outline of tools that can decode the relevant data the book is organized into two distinct parts first part i describes several different file systems that are commonly used in mobile devices apfs is the file system that is used in all modern apple devices including iphones ipads and even apple computers like the macbook series ext4 is very common in android devices and is the successor of the ext2 and ext3 file systems that were commonly used on linux based computers the flash friendly file system f2fs is a linux system designed explicitly for nand flash memory common in removable storage devices and mobile devices which samsung electronics developed in 2012 the qnx6 file system is present in smartphones delivered by blackberry e.g devices that are using blackberry 10 and modern vehicle infotainment systems that use qnx as their operating system second part ii describes five different file formats that are commonly used on mobile devices sqlite is nearly omnipresent in mobile devices with an overwhelming majority of all mobile applications storing their data in such databases the second leading file format in the mobile world are property lists which are predominantly found on apple devices java serialization is a

popular technique for storing object states in the java programming language mobile application app developers very often resort to this technique to make their application state persistent the realm database format has emerged over recent years as a possible successor to the now ageing sqlite format and has begun to appear as part of some modern applications on mobile devices protocol buffers provide a format for taking compiled data and serializing it by turning it into bytes represented in decimal values which is a technique commonly used in mobile devices the aim of this book is to act as a knowledge base and reference guide for digital forensic practitioners who need knowledge about a specific file system or file format it is also hoped to provide useful insight and knowledge for students or other aspiring professionals who want to work within the field of digital forensics the book is written with the assumption that the reader will have some existing knowledge and
